      - Google Chrome 65.0.3325.181
- MSInfo32 now used for system information collection
- Calibration score: 1000

## **Fixes/Updates**

- Added Power Status, Memory Channels, VBS status, and Memory Integrity information to the FDR

## **Known issues**

- Microsoft OneDrive crashes on some systems and interferes with benchmark run
  - Workaround: Uninstall OneDrive before installing benchmark
- The Watts Up .Net meter may require up to 25 minutes to power up when first turning it on before being ready for use.
- OneNote email workload may select UWP version of Outlook which causes the workload to error. Workaround is to set default application to Outlook 2016.
- PowerDirector crashes once in a while after the hardware encode in the CR scenario.
- Microsoft Office application workloads will fail if a pre-existing installation of Office is not completely cleaned out before install.
